

code to receive at least a portion of the content in an encrypted form; and

code to decrypt the at least the portion of the content during the second period of time using the decryption key.

30. The non-transitory machine-readable medium of claim **29**, wherein the code further comprises:

code to display the decrypted at least the portion of the content during the second period of time.

31. The non-transitory machine-readable medium of claim **29**, wherein the code further comprises:

code to receive a security policy along with the decryption key, wherein the security policy specifies at least one of: a maximum number of times the decryption key may be used to decrypt the at least the portion of the content over the second period of time, or a maximum number of client devices on which the decryption key may be used to decrypt the at least the portion of the content.

32. The non-transitory machine-readable medium of claim **29**, wherein the content comprises video content.

33. The non-transitory machine-readable medium of claim **29**, wherein the second period of time is different than the first period of time.

34. A device comprising:

a memory; and

at least one processor configured to:

transmit a request for time-limited access to content; receive, responsive to the request, the time-limited access to the content, wherein the time-limited access comprises a first time period for initiating access to the content and a second time period for accessing the content after initiating access within the first time period;

initiate access to the content within the first time period; and

access at least a portion of the content within the second time period.

35. The device of claim **34**, wherein the content is encrypted and the at least one processor is further configured to:

receive a decryption key for accessing the content; and decrypt the at least the portion of the content using the decryption key to access the at least the portion of the content within the second time period.

36. The device of claim **34**, wherein the at least one processor is further configured to:

access the at least the portion of the content within the second time period by receiving the at least the portion of the content streaming from a server.
